SUMMARY

Third-year Computer Science student with hands-on experience in software development, full-stack web development, REST API development, database design, and system development. Experienced with **Java, C++, React, JavaScript/TypeScript, PHP, Spring Boot, MySQL, and PostgreSQL**, with practical experience building and integrating RESTful APIs and developing applications backed by relational databases.

I have developed practical software systems involving **equipment management, rentals, maintenance tracking, student resource sharing, and business management**. I am particularly interested in software engineering, backend development, system design, cloud technologies, and building reliable solutions to real-world problems. Currently seeking opportunities to further develop my technical and professional skills through a software engineering internship.

TECHNICAL SKILLS

Languages:

C++, Java, PHP, SQL, JavaScript, TypeScript, Python

Frontend:

React, HTML, CSS, Tailwind CSS

Backend & APIs:

Java Spring Boot, PHP, REST APIs, RESTful Web Services, API Integration

Databases:

MySQL, PostgreSQL

Development & Tools:

Git, GitHub, VS Code, Vercel, Railway

Software Engineering:

Object-Oriented Programming, Database Design, CRUD Operations, API Development, System Design, Debugging, Version Control

EDUCATION

University:

The Copperbelt University – Kitwe, Zambia

Bachelor of Science in Computer Science

Expected Graduation: 2028

Relevant Coursework:

OOP | Data Structures & Algorithms | Databases | Computer Networks

Software Engineering | Theory of Automata

PROJECTS

1. TeleChess – Automated ChessBoard

+ Python | Embedded Systems | Sensors

- TeleChess is a system that bridges physical and digital chess gameplay. It implements the fundamental technologies of existing systems while allowing room for innovation which is to let players from different locations play on their own chess boards.

2. ESCHOOL - Material Sharing Platform

+ PHP | JavaScript | CSS | MySQL | HTML

- ESCHOOL is a student data and materials sharing platform that allows students to distribute academic and helpful materials among each other why also allowing them to make money from that.

3. reStock – Stock Check Platform

+ React | TypeScript | Java | PostgreSQL | Spring Boot

- reStock is a business management system that allows small and large businesses to properly manage and keep track of there stock, it informs owners what sells most, what to restock on and the best business practices.

4. BML Sound Management System: Equipment Rental & Management Platform

React | Java | Spring Boot | MySQL | Tailwind CSS | REST APIs | Vercel | Railway

Developed a full-stack management system designed for businesses that rent and maintain sound equipment.

- Developed a **React and Tailwind CSS frontend** for managing equipment, customers, rentals, and maintenance.
- Developed a **Java Spring Boot backend** exposing RESTful APIs for frontend-backend communication.
- Designed and implemented relational database structures using **MySQL**.
- Implemented CRUD operations for equipment and other business entities.
- Implemented equipment rental and return workflows with equipment availability tracking.
- Developed functionality for **maintenance and repair tracking**.
- Implemented relationships between equipment, equipment types, customers, rentals, rental items, maintenance records, and technicians.
- Integrated the frontend with backend REST APIs using Axios.
- Deployed the frontend using **Vercel** and the backend/database using **Railway**.
- Applied database separation for a public demonstration environment to protect the original application data.

Live Demo: <https://sound-management.vercel.app>

LEADERSHIP & EXPERIENCE

Software Engineering / Team Leader & Mentor: I have lead a few software engineering teams that mostly involved web development projects. During the projects I continued the research and learn more to grow individually which caused others to be impacted by me because they could freely ask where not clear and I would help them.

Robotics / STEM Team – Assistant: The robots team that I assisted in was the TeleChess group projected, my quick understanding of things made it easy for me to assist and explain the operations to the group member's that couldn't understand.

Group Projects / Team Leader: Once again things that involve stepping up, I am there because of my quick understanding and desire to learn and grow as a software engineer that caused me to lead in most of my group projects inclusive of the fact that I explain things well to people.

LANGUAGE

English – Fluent
